QUESTIONS

Q1
Handling ArithmeticException
10 marks

Q2
Handling ArrayIndexOutOfBoundsException
10 marks

Q3
Handling NumberFormatException
10 marks

Q4
Handling Multiple Exceptions
10 marks

4/4 answered

Q1 **Handling ArithmeticException** 10 marks

Write a Java program to divide two integers entered by the user. If the denominator is zero, handle the exception using a try-catch block and display an appropriate error message.

Your Code

```
import java.util.*;
class Main {
    public static void main(String[] ar
        Scanner sc = new Scanner(Syster
        int a = sc.nextInt();
        int b = sc.nextInt();
        try {
            System.out.println(a / b);
        }
        catch (ArithmeticException e) {
            System.out.println("Cannot
        }
    }
}
```

Input

```
20
2
```

Output

```
10
```

Q2 **Handling ArrayIndexOutOfBoundsException** 10 marks

Write a Java program to create an integer array of five elements. Ask the user to enter an index and display the corresponding element. If the index is outside the valid range, handle the exception and display an error message.

Your Code

```
import java.util.*;
class Main {
    public static void main(String[] ar
        int a[] = {10, 20, 30, 40, 50};
        Scanner sc = new Scanner(Syster
        int index = sc.nextInt();
        try {
            System.out.println(a[index]
        }
        catch (ArrayIndexOutOfBoundsExc
            System.out.println("Invalic
        }
    }
}
```

Input

2

Output

```
30
```

Q3 **Handling NumberFormatException** 10 marks

Write a Java program to accept a number as a string and convert it into an integer using Integer.parseInt(). If the input is not a valid integer, handle the exception and display an appropriate message.

Your Code

```
class Main {
    public static void main(String[] a
        String s = "123";
        try {
            int n = Integer.parseInt(s)
            System.out.println(n);
        }
        catch (NumberFormatException e)
            System.out.println("Invalic
        }
    }
}
```

Input

8/11/26, 10:10 AM SIMATS Online Lab

```
stdin input
```

Output

```
123
```

Q4 **Handling Multiple Exceptions** 10 marks

Write a Java program that performs the following operations:

Accept two integers from the user.
Divide the first number by the second.
Store the result in an array.
Handle both ArithmeticException and ArrayIndexOutOfBoundsException using multiple catch blocks.

Your Code

```
import java.util.*;
class Main {
    public static void main(String[] ar
        Scanner s = new Scanner(System.
        int a = s.nextInt(), b = s.next
        int x[] = new int[1];
        try {
            x[0] = a / b;
            System.out.println(x[0]);
        }
        catch (ArithmeticException e) {
            System.out.println("Divide
        }
        catch (ArrayIndexOutOfBoundsExc
            System.out.println("Invalic
        }
```

```
    }
}
```

Input

```
10 2
```

Output

```
5
```
